(54) MOISTUREPROOF OPTICAL MATERIAL AND ITS PRODUCTION

(57)Abstract:

PURPOSE: To provide an IR optical material having excellent moistureproof property without requiring a costly and large-scale device by applying a vinylidene chloride based copolymer-contg. moistureproof layer having a crystalline region on the IR optical material.

CONSTITUTION: The vinylidene chloride-based copolymer having the crystal region is dispersed and dissolved in a tetrahydrofuran-contg. liquid mixture. The liquid is applied on the IR optical material. The solvent mixture is evaporated to form the vinylidene chloride-based copolymer film having the crystal region to serve as the moistureproof layer. The moistureproof layer preferably contains ≥ 70 wt.% vinylidene chloride-based copolymer. The IR optical material includes KBr, NaCl, KCl, CsI, KRS-5, KRS-6, LBO, DLAP, BBO and KTP as IR transparent optical material and includes ZnSe, CaF₂ (fluorite), SiO₂ (quartz), Al₂O₃ (sapphire) and glass as IR reflective optical material.
